

Dealers choice: The Poker Analyzer

Instructions

Congratulations on the purchase of one of the most sophisticated cheating devices on the market. This mock phone will allow you to know the winning seat every deal. This is ideal for the dealer who could signal their friends playing.

Here's how it works:

The deck of cards that came with your order has secret IR markings on all 4 sides of the deck. To the naked eye the deck looks normal, but the deck is ready to be read! The poker analyzer has a secret camera on the right side of phone (if looking at the screen). The side looks like it is all chrome but there is actually a camera and purple UV lighting reading the deck of cards once the program is on. The program will signal you with a wireless earpiece (provided). Every time the deck comes within 30-40 cm of the camera readings it will spit out the winning seat in terms of 1,2,3,etc. So if the device reads "one...one...one..one" that means small blind has the winning seat. I have videos showing this on:

www.howtomarkcards.com/poker-analyzer.html (there are 2 videos showing proof of device)

Once you receive your poker analyzer here is how you set it up to start practicing:

1. Charge "phone" or turn on phone. The device comes with a battery in the unit and an extra battery.
2. Once device is turned on, explore it. It looks like a normal phone. Add contacts, etc to make it look authentic.
3. Open the call dial like you were making a phone call and type the code: #3721# this will open up the secret poker analyzer app.
4. The login screen should be set up as "English" with the user/pw typed in. All you have to do is click "Login"
5. Once you are in the poker analyzer explore. Some of the buttons are useless but you can go to the settings and set up if you want the device to read with the screen up (I call this practice mode so you can test the product) or for the camera to read with screen down. When you are playing the real game you should have device set up for screen down.
6. There is a player setting 2-26 players. Usually you will have this set between 7-9 players. You can always change the setting with the volume button or by the remote switch that comes with your poker analyzer. The + and - buttons control how many players during the game for a quick switch.
7. While still in settings you can also control if you want the device to work with external speakers or the ear bud that it comes with. Make sure you put the battery in the ear bud.

8. Starting the game: Go into the game and under "texas" the very first selection is the American Texas hold-em rules. Choose the very first selection to play Texas Hold Em'. If there is a game in mind, a good rule to go by is whatever the total amount of cards are on the table + how many are in your hand is the amount of cards in the game selection. Like Texas Hold Em' is 7 cards. If you are playing 7 card stud or Omaha just explore the different selections and test/practice with the cards to see if it is the correct game.
